EDUCATION

Augusta University
Bachelor of Science, Cybersecurity

May 2027
Augusta, GA

CERTIFICATIONS

- CompTIA CySA+: June 2026
- Google AI Essentials: May 2026
- CompTIA Security+: May 2025
- GIAC Foundational Cybersecurity Technology (GFACT): Sep 2023

EXPERIENCE

SEIGE CyberOps

Jan 2026 - Present

Cybersecurity Engineer

- Configure, deploy, and maintain enterprise security tools such as Microsoft Sentinel, Tenable, and ServiceNow across endpoints, servers, and network infrastructure, ensuring continuous protection of critical assets
- Monitor and investigate security alerts in Microsoft Sentinel and Microsoft Defender, analyze logs, and escalate confirmed threats, resulting in timely containment of incidents
- Perform vulnerability assessments with Tenable, prioritize findings, and coordinate remediation with IT teams, leading to accelerated patch deployment and reduced risk exposure
- Manage ServiceNow security tickets for VPN access, privileged accounts, and vulnerability remediation tracking, maintaining a clear audit trail and ensuring tickets are resolved within SLA
- Integrate new security controls such as endpoint detection and response and network micro-segmentation, reducing the attack surface and improving detection capabilities across the environment

PROJECT/COMPETITION EXPERIENCE

Home Security Lab – Proxmox Homelab and Media Server

May 2026

- Deployed and configured a Proxmox VE hypervisor on dedicated hardware, managing virtual machines and containers to simulate enterprise-grade infrastructure and support cybersecurity experimentation.
- Installed Tailscale VPN on the Proxmox host to enable secure remote access to the management interface from any location without requiring physical presence.
- Spun up a Jellyfin media server as a self-hosted streaming solution, accessible remotely via Tailscale and locally via Samba file shares.

NCAE Cyber Games

Feb 2026

- Team Member – CTF Competitor
- Contributed to a team that placed fifth regionally in a Capture The Flag (CTF) competition, solving advanced challenges in cryptography, web exploitation, and dark web investigations using the Tor Browser to access and analyze onion services.
- Performed web application exploitation by identifying vulnerabilities in HTTP requests/responses and conducted reverse engineering on corrupted Java files to recover functionality and extract hidden data.
- Analyzed security logs using Splunk and CrowdStrike to identify indicators of compromise, investigate malicious activity, and support decision-making on incident response.

Collegiate Penetration Testing Competition (CPTC)

Nov 2025

- Team Member
- Conducted authorized penetration testing in a competitive team environment, identifying and exploiting vulnerabilities in Windows and Linux systems, web applications, and network services.
- Performed reconnaissance and vulnerability analysis using tools such as Nmap, Burp Suite, Metasploit, and Wireshark, documenting findings and validating exploit impact.
- Produced professional-style reports detailing attack paths, risk severity, and remediation recommendations, while collaborating with teammates to prioritize targets and improve the testing methodology.

Collegiate Cyber Defense Competition (CCDC)

Feb 2025

- Team Member - SSH Admin
- Defended a production-like enterprise network against live cyber attacks while maintaining system uptime
- Implemented and tuned Fail2Ban, rkhunter, and ClamAV for intrusion detection and host protection
- Conducted system hardening, patching, and continuous monitoring under active threat conditions
- Investigated suspicious activity and documented incidents with remediation recommendations

SKILLS

Languages: Python, JavaScript, Java, SQL, HTML, CSS

Security Platforms and Tools: Microsoft Sentinel (SIEM), Microsoft Defender, CrowdStrike, Splunk, Tenable, ServiceNow, Cisco Umbrella, Absolute, Nmap, Metasploit, Burp Suite, Wireshark, WhatWeb, DirBuster, Tor Browser, Fail2Ban, rkhunter, ClamAV

Operating Systems: Windows 10, Windows 11, Kali, MacOS, Ubuntu, Raspberry Pi

Infrastructure and Networking: Proxmox, Tailscale, Virtualization, TCP/IP protocols, IPv4/IPv6 configuration, DNS filtering, Firewall configuration, Network troubleshooting, System hardening and patching, Incident response
