EDUCATION

Augusta University

Bachelor of Science, Cybersecurity | Augusta, GA

May 2027

CERTIFICATIONS

CompTIA CySA+: June 2026 | Google AI Essentials: May 2026 | CompTIA Security+: May 2025

GIAC Foundational Cybersecurity Technology (GFACT): Sep 2023

EXPERIENCE

SEIGE CyberOps

Jan 2026 - Present

Assistant Cybersecurity Engineer

- Configure, deploy, and maintain Microsoft Sentinel, Tenable, and ServiceNow across endpoints, servers, and network infrastructure; integrate endpoint detection and response and network micro-segmentation controls.
- Investigate alerts in Microsoft Sentinel and Microsoft Defender, analyze logs, and escalate confirmed threats to support timely incident containment.
- Perform vulnerability assessments with Tenable, prioritize findings, and coordinate remediation with IT teams to accelerate patch deployment and reduce risk exposure.
- Manage ServiceNow tickets for VPN access, privileged accounts, and vulnerability remediation, maintaining audit trails and resolving tickets within SLA.

PROJECT / COMPETITION EXPERIENCE

VR Teleport (SIMULACRA) - HackGT 13, Georgia Tech

Sep 2026

Team Member | [Devpost project](#)

- Collaborated on a spatial telepresence prototype for desktop browsers and Meta Quest 3, combining React, Three.js, WebXR, and WebRTC for live calls with flat, 360-degree, and stereoscopic 180-degree viewing modes.
- Worked with the team to integrate dual-webcam stereoscopic capture and per-eye rendering, creating depth from separate left- and right-eye perspectives.
- Contributed to team testing, debugging, and integration of the calling system, which used Node.js, Express, Socket.IO, JWT authentication, and STUN/TURN support for connectivity across networks.

Home Security Lab - Proxmox Homelab and Media Server

May 2026

- Deployed Proxmox VE on dedicated hardware, managing virtual machines and containers to simulate enterprise infrastructure and support cybersecurity experimentation.
- Configured Tailscale VPN for secure remote management and a Jellyfin media server accessible remotely through Tailscale and locally through Samba file shares.

NCAE Cyber Games

Feb 2026

- As a CTF competitor, contributed to a fifth-place regional team, solving cryptography, web exploitation, and dark web investigation challenges using Tor Browser to analyze onion services.
- Exploited HTTP request/response vulnerabilities and reverse engineered corrupted Java files to recover functionality and extract hidden data.
- Analyzed Splunk and CrowdStrike logs to identify indicators of compromise, investigate malicious activity, and support incident response decisions.

Collegiate Penetration Testing Competition (CPTC)

Nov 2025

- Conducted authorized penetration testing of Windows and Linux systems, web applications, and network services using Nmap, Burp Suite, Metasploit, and Wireshark.
- Documented findings and validated exploit impact; collaborated on reports detailing attack paths, risk severity, and remediation recommendations.

Collegiate Cyber Defense Competition (CCDC)

Feb 2025

- As SSH Admin, defended a production-like enterprise network against live attacks while maintaining uptime; implemented and tuned Fail2Ban, rkhunter, and ClamAV for intrusion detection and host protection.
- Hardened and patched systems, monitored suspicious activity, and documented incidents with remediation recommendations.

SKILLS

Languages: Python, JavaScript, Java, SQL, HTML, CSS

Security Platforms and Tools: Microsoft Sentinel (SIEM), Microsoft Defender, CrowdStrike, Splunk, Tenable, ServiceNow, Cisco Umbrella, Absolute, Nmap, Metasploit, Burp Suite, Wireshark, WhatWeb, DirBuster, Tor Browser, Fail2Ban, rkhunter, ClamAV

Operating Systems: Windows 10/11, Kali, MacOS, Ubuntu, Raspberry Pi

Infrastructure and Networking: Proxmox, Tailscale, virtualization, TCP/IP, IPv4/IPv6, DNS filtering, firewall configuration, network troubleshooting, system hardening and patching, incident response
